May 15, 2000

Dear Adam:

This is to request consideration of a minor amendment to our Conditional Use Permit R82-221(R-2), previously amended by resolution R-99-69.

Amendment R-99-69 allowed the removal of coal flyash for beneficial reuse from our landfill on Wolftrap Road. Due to depressed market conditions, there has not been enough demand to necessitate removal of ash from the landfill or to warrant installation of a weigh scale and road turnout at the landfill facility.

Our ash marketer, VFL Technologies, Inc., has a potential sale of material for a large project that could begin as early as the end of May. This potential sale would be large enough to warrant removal of material from the landfill, and could serve as a demonstration project to confirm that we are able to deliver quantities of material which would support a large project. This in turn could help us to qualify for large road construction projects foreseen for this summer.

In order to allow us to respond to this upcoming project, Yorktown Power Station requests permission to be able to remove ash from the landfill and transport it off site by way of the station's haul road and existing turnout onto Hornsbyville Road. A diagram is enclosed that shows the proposed haul route from the facility. Trucks would initially come to the power station to be weighed empty, then would go to the landfill to be loaded with ash, would return to the station to be weighed, and then would proceed along the route shown on the attached diagram to deliver the material to the project.

This proposed route on Hornsbyville Road would not pass any residences or other buildings before intersecting with Goodwin Neck Road, and the distance between the haul road and Goodwin Neck Road would be shorter than the Wolf Trap Road route.

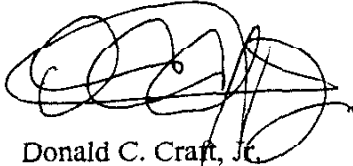

Condition A33 of Amendment R-99-69 requires a surety to VDOT for \$25,000 to cover potential road damage. Bond VCVA00268 currently exists for the amount of two million dollars to cover highway damages caused by Virginia Electric and Power Company.

The immediate project is expected to require approximately 20,000 to 30,000 cubic yards of material. We would like to obtain approval to haul ash by the alternate route for a duration of up to 12 months, to allow us to accommodate this and other projects for beneficial reuse of coal ash.

Please let me know if you need additional information.

Very truly yours,

A handwritten signature in black ink, appearing to read "Donald C. Craft, Jr.", written over a horizontal line.
